

Wang happens to make a better small computer than IBM.

The Wang 2200 computer versus the IBM 5100 computer. When you make a few simple comparisons, you'll find there simply is no comparison.

First, we cost \$3,575* less.

On peripherals, we win again: 35 to 3.

Our 9" diagonal CRT is to their 5" diagonal screen as cinemascope is to a picture postcard.

IBM has 114 programs. The Wang General Library offers twice as many.

F5/56dDP22

*U.S. domestic prices only.

The Wang 2200 processes BASIC programs up to four times faster. And tests show their machine uses up to twice the memory for an identical program.

You can get a Wang 2200 on your terms: rent, lease or buy one.

Wang has been producing desk top computers since 1967. IBM introduced the 5100 in September, 1975.

All things considered, do you want to buy a great big company or a great little computer?
